10 Find the $x$ value of the point on the curve $y=x^{2}-6 x+8$ where the gradient is equal to 0.
Also do a sketch to verify whether this is a maximum point or a minimum point.

11 Find the $x$ values of the points on the curve $y=2 x^{3}-6 x^{2}-12$ where the gradient is equal to 0.
Also do a sketch to verify which value gives a maximum point and which value of $x$ gives a minimum point.
Between what two $x$ values is this function decreasing?
